                                                                                                                                                                                                                                                                                                                                                                                                                     Coville G.;
Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Binds to occyte zona pellucida in vivo. May play a rol
in the fertilization process and/or early embryonic development.
-!- SUBCELLIDIAR LOCATION: Secretory granules.
-!- TISSUB SPECIFICITY: Oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.

-!- FUNCTION: May play an important role in the capacity of cells to respond to and cope with changes in their environment.
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Present in articular chondrocytes, synovial cells as well as in liver. Undetectable in muscle tissues, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDIINE=90328983; PubMed=2375755;

Novel high moused to modif	Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.
Claim 3; Page	111-113; 154pp; English.
This sequence	represents Dermatopha 555. Pherf98-555 has
comprising 555	a component of the

```
farinae high molecular weight mite allergen protein (HWM-map) composition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, tragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as
                                                                                                                                                                                                                                                                                                                                                                                        allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 555 AA;

The invention relates to an isolated mite allergenic protein of bermatophagoides, designated Der HMW-map protein, and its related nucleic caid. The Der HMW-map protein is useful for allociting an immune response caid. The Der HMW-map protein. The protein or a reagant comprising a non-proteinstell ber or having an allergic response to a mite. A cal susceptible to or having an allergic response to a mite. A charing an allergic response to a mite. A charing an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the composition of anti-per HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig) B or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgB, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                    Dermatophagoides, designated for treating mite allergy.

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for aliciting an immure response against Der HWW-map protein. The protein or a reagent comprising a nonprotein association to real susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the conformation of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map protein activity associated with a binding of proteins to IgE, to prevent immunocomplex formation, thus benduing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU963142 represent Der HWW-map polypeptides of the invention

This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf88-536, the mature form of PDerf88-555 (AAY52523). PDerf88-536 has been a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite allergen protein (HWM-map) composition. The HWM-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or composition animals. The proteins of fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, recover desired dust mite allergens from a mixture of proteins
                                                                           Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.
                                                                                                                                                        Claim 3; Page 125-127; 154pp; English

Dermatophagoides, designated Der MRW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response acid. The Der HWW-map protein is useful for eliciting an immune response to against Der HWW-map protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         YTMHYYLNNGATRDKLVMGVPFYGRAWSIEDRSKLKLGDPAKGMSPPGFISGEEGVLSYI 319

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-509. PDerp98-509 has a molecular weight of 98 kD, comprising 509 amino acids, and has a high degree of homology with the D. farinae 98 kD allergen, map8 (AAYS2523). Nucleic acid molecules encoding PDerp98-509 were isolated from a D. pteronyssius cDNA library by Pybridisation with a probe encoding the D. farinae high molecular weight map (HFW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to
                                                                                                                                                                                                                                                                                                                                                                                                                    Mite allergen protein; map; high molecular weight; HMW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             . high molecular weight Dermatophagoides nucleic acid polypeptides to modify an animals' hypersensitivy to mite allergens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ---PTTTDSTSETPKYTTYIDGHLIKCYKQGYLPHPTDVHKYLVCEYIATPNGGWWVHIM 491
modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins.                                                                                                                                                                                                                                                                                   The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a nonprotein sousceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to amite. The DNA and protein can be used in the allergic response to a mite. The MW-map protein can be used in the cettion of anti-Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map protein activity associated with a binding of proteins to IgE, to prevent immunocomplex formation, thus be induing hypersensitivity. Response to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AMU96314-AAU96342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            420

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a nonprotein. The protein or a reagent comprising a noncrease spitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the cherapeutic dati-der HWM-map antibodies in animal fullids, and inhibition of immunoglobulin (Ig)E or Der HWM-map protein activity associated with a disease. Antibodies that bind to Der HWM-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus creducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HWM-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mite allergenic protein isolated from Dermatophagoides, designated Der HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MKTTFALFCIWACIGLMNAATKRDHNNYSKNPMRIVCYVGTWSVYHKVDPYTIEDIDPFK

This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp99-490, the mature form of pDerp98-509. PDerp98-490 has protein (map) PDerp99-490, the mature form of pDerp98-509. PDerp98-490 and has a high degree of homology with the D. farinae mature 98 kD allergen, mapB (AAY52525). Nucleic acid molecules encoding PDerp98-490 were isolated from a D. pteronyssius cDNA library by Mybridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal show treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fargenesis and birds, especially felines, which have a variety of peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vacines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as cools to recover desired dust mite allergens from a mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated bor HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagant comprising a nonproteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for identifying a normal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA map protein can be used in the disease. Antibodies that bind to Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. This protein is used in claimed fusion proteins of the invention. Such fusion proteins comprise a translocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polynucleotides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists
                                                                                                                                                                                                                                                                               13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           245

capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to an isolated nucleic acid detection reagent

Disclosure; SEQ ID NO 2577; 21pp + Sequence Listing;

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     An epidermal and gut chitinase (AAW01824) of Manduca sexta is encoded by CDNA clone 201 (AAF62557), isolated from a day-6 fifth instar whole larva cDNA library. The CDNA can be inserted into a vector for host expression of the chitinase protein, and may be utilised to control a population of insect petcs. A recombinant baculovirus vector is provided for this purpose, as well as a transgenic tobacco plant that shows increased resistance to tobacco hornworm. Recombinant chitinase may also be expressed in host cells or larvae for subsequent purification and use as a biooide. The insect chitinase is expected to be more potent as an insect control agent than chitinases from other sources

sexta chitinase.

```
The present sequence is the protein sequence for the Manduca sexta gut chithnase. It was used to isolate the Drosophila melanogaster imaginal disc growth factor 4 (IDGF4) coding sequence. IDGF4 is a member of the chitinase related proteins (CHRP4) and is involved in the promotion of cell growth, motility and morphogenesis. The gene and protein are expected to have mammalian homologues. They can be used in the treatment of cancer, wound healing, tissue regeneration following arthritis, osteoporosis, other skeletal disorders and burns, for revitalising scar tissue resulting from surgical procedures, irradiation, laceration, toxic chemicals, viral or bacterial infection or burns, to promote tissue growth during tissue engineering, for example tissues for skin graft replacements and bone regrowth, and to modulate the function of the female reproductive tract. In addition, they can also be used to increase meat, egg, sperm and milk production in animals. One possible method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            449
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               497

The present sequence is that of Manduca sexta chitinase. This protein can comprise a translocating molety and a toxic molety, where the translocating molety and a toxic molety, where the translocating molety is a plant protein (e.g. a lectin) capable of acting as a carrier to translocate the toxic molety is an insect-derived peptide or plant pathogen, and the toxic molety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable insect peptides and proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polymucleotides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              124
